

Please direct inquiries or CV to jobs@meradia.com

Meradia is a consulting firm that helps investment management firms maximize operational efficiency and manage change initiatives. Often that change comes in the form of operational transformation as firms seek to replace or enhance their data management, accounting, investment performance or information delivery capabilities. Meradia has been leading or executing strategic initiatives since 1997 with an emphasis on data quality, automation and cost control. Meradia seeks to attract and retain a team of ambitious, competitive and talented consultants committed to providing a differentiating level of service. Meradia's clients are geographically dispersed. Applicants should be willing and able to travel domestically.

Meradia is presently recruiting for technical business analysts who are subject matter experts in front office technology solutions. Specifically seeking consultants, business analysts or technology experts in the following software platforms: Aladdin, Charles River, Bloomberg, Factset, Latent Zero (Fidessa), Markit EDM.

Requirements:

- Analyze business requirements and make them actionable for development by validating logic, feasibility and testing assumptions.
- Provide Meradia's clients with functional guidance through the successful development and integration of new systems.
- Drive results and focus on deliverables.
- Develop and maintain communication including project plans, status memos, procedural and operational documentation.

Ideal candidates will have the following:

- Minimum 5 years' experience working in or managing front office implementations. This would include data analysis, requirements, configuration, definition and testing for one or more of these core front office platforms: Aladdin, Charles River, Bloomberg, Factset, Latent Zero (Fidessa), Markit EDM.
- Minimum 5 years in the investment management or financial services industry. Ideal candidates possess 10 or more in a combination of operational and IT roles.
- Knowledge of a broad range of investment products from equity to fixed income, derivatives and alternatives.
- Experience designing, developing and implementing complex technology solutions.
- Excellent interpersonal, verbal and written communication skills. Business analysts need to be able to navigate complex organizational structures and communicate with both technical and operational stakeholders. Great communication and emotional intelligence are key to success in this area.
- Strong analytical mindset.
- Pro-active, assertiveness.
- Working capabilities with Oracle PLSQL.

- MBA, CFA charter-holder, CIPM designees are strongly preferred.
- Willingness to travel is a must
